Understanding Mesh Wall Toppers:

What are they?

Scope: These mesh wall toppers are designed to be installed atop existing walls, fences, or structures. They offer added height and deterrent features for applications requiring enhanced boundary protection.

Purpose: To provide a practical and cost-effective means of increasing perimeter height and security without replacing existing infrastructure.

Intention: To help deter unauthorised access, enhance safety, and support compliance with security and safety requirements in commercial, industrial, and residential environments.

How Does This Influence Design?

Modular Compatibility: The toppers are engineered to work seamlessly with existing walls or fencing systems, allowing for straightforward retrofitting without the need for major structural changes.

Weight Considerations: Panels are manufactured from lightweight mesh materials to minimise additional load, making them suitable for older or non-reinforced structures.

Fixing Solutions: A variety of bracket and post options are available to suit different mounting surfaces such as brickwork, concrete, or steel, ensuring secure and reliable installation.

Aesthetic Continuity: Mesh styles and coating finishes are chosen to visually complement existing boundary treatments, maintaining a cohesive and professional appearance.

Security Focused: While increasing overall height, the mesh design allows for clear visibility through the fence line, helping to deter intruders without creating blind spots.

Height Efficiency: The 0.6m extension increases security in a discreet way, often avoiding the need for full-height fencing replacements or triggering additional planning requirements.

Four Versions, One Supplier

Bolt Down

90° Cranked

Wall Mounted

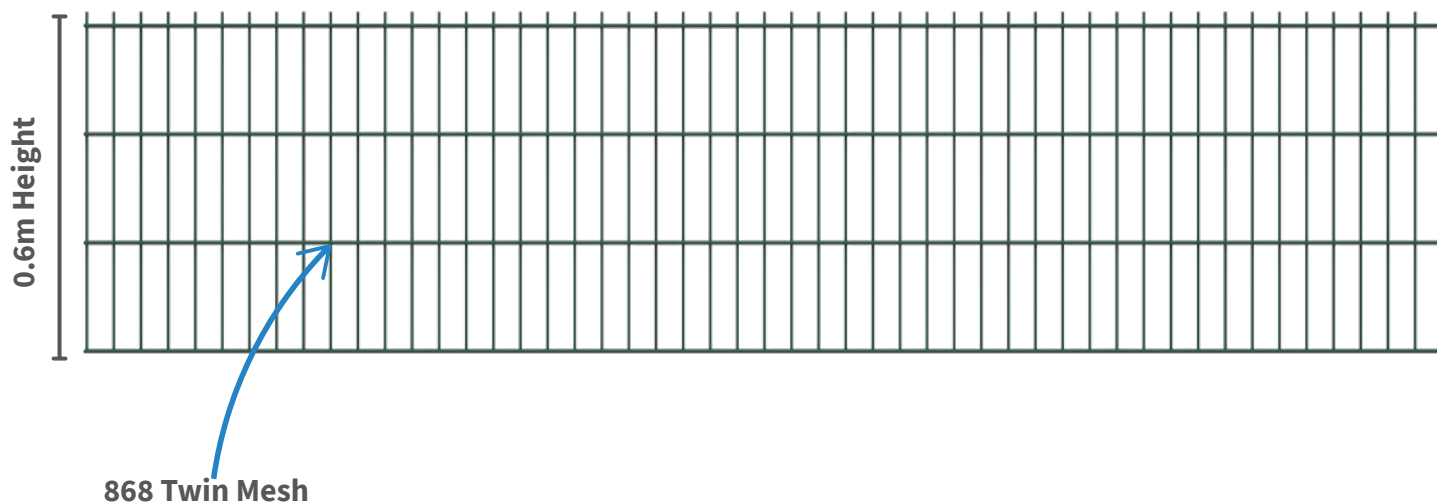

60° Cranked

A look at the panel

It's what's inside that counts

- ✓ 0.6m Height Above Surface
- ✓ Four post options
- ✓ Polyester Powder Coating

Extras, accessories, and fixings, oh my!
