The BS 5837 at a glance:

What is BS 5837:2012?

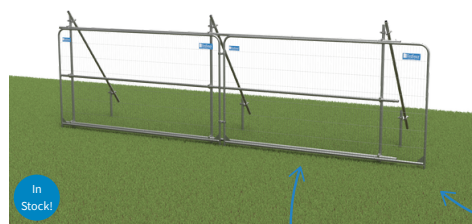

- Scope:** Applies to the relationship between trees and construction processes—from design to demolition. It provides recommendations for managing and protecting trees on and near development sites.
- Purpose:** To guide the sustainable integration of trees into new developments, ensuring the long-term retention and health of valuable trees.
- Intention:** To help successfully integrate trees into a development, minimizing damage and allowing them to continue providing environmental and landscape benefits.

How Does This Influence Design?

- Root Protection:** Explicitly designed to safeguard Root Protection Areas (RPAs) as per BS 5837:2012, preventing soil compaction and root damage.
- Clear Demarcation:** Provides a highly visible and robust barrier, clearly defining exclusion zones around protected trees.
- Durability & Stability:** Manufactured from high-quality, robust materials, ensuring stability and long-term performance in demanding site conditions.
- Adaptable Design:** Available in various configurations and sizes to suit diverse site layouts, tree sizes, and specific protection requirements.
- Ease of Installation:** Engineered for quick and secure setup, allowing for efficient deployment and potential relocation as site conditions change.
- Full Compliance:** Guarantees adherence to British Standard 5837:2012 recommendations, aiding in planning application approval and responsible development.

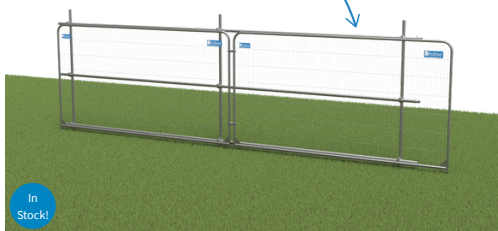

Three Versions, One Supplier

Scaffold Tube Frame kit

Back Braced (Scaffold Tube Frame)
(Compliant with BS 5837:2012)

6.4m width (Scaffold Tube Frames)
(Designed to be used with 2 temporary fence panels per kit)

Various Post Lengths (Timber)
(8ft & 10ft for when supports need to be dug further into the ground)

Timber Post Frame kit

Scaffold Tube Frame kit (Vertical brace only)
