

# INSTALLATION AND SAFE HANDLING

Follow the process below for safe and effective installations.

Risk assessments should be carried out to ensure the usage is suitable for the scenario.

Assess conditions of the ground and traffic passing over the EnduraMats.

Two person lift.

Bend at the knees in line with best practise.

Position product onto area requiring ground protection.

Depending on traffic and conditions connect multiple EnduraMats with either light or heavy duty coupler.

When using the Light Duty coupler, place one end of the coupler into the first Enduramat and then the second into the second Enduramat.

When using the Heavy Duty coupler, place the back plate behind the Enduramats, feeding the bolts through the Enduramat holes.

Do this for up to four Enduramats. Place the front plate on top and secure with nuts.

Repeat until the area is covered.
