## Maximum Security, Total Privacy!

Our Steel Hoarding Panels deliver a combination of heavy-duty perimeter protection and complete visual screening, engineered to safeguard construction sites, infrastructure projects, and high-profile events in the most demanding environments. Featuring solid steel construction and a wind-resistant design, these high-security panels create a continuous, tamper-resistant barrier that deters theft, prevents trespassing, and shields active work sites from prying eyes—making them the ultimate perimeter control solution for demanding commercial and public applications.

Engineered from galvanised steel with optional custom powder-coated finishes, these modular hoarding panels combine weather resistance with long-lasting structural strength and professional site branding. Available in standard **2.0m** and **2.4m** heights (with a 2.14m width), heavy-duty **SteelWall** configurations, and convenient full-system packages complete with feet and couplers, they offer rapid deployment and seamless integration with matching pedestrian and vehicle gates.

### Key Features

- ⊙ **Solid Steel Privacy & Security**  
(Forms a continuous, high-security visual barrier)
- ⊙ **Standardised Modular Sizing**  
(Available in 2.0m and 2.4m height options)
- ⊙ **Corrosion-Resistant Finish Options**  
(Galvanised steel for maximum weather durability with optional powder coating)
- ⊙ **Rapid Deployment & Complete Systems**  
(Designed for fast, straightforward assembly, as individual or complete packages)
- ⊙ **Heavy-Duty Wind & Impact Resistance**  
(Designed for maximum rigidity in demanding outdoor conditions)

### Suitable For

- ⊙ Active Construction Sites
- ⊙ Major Infrastructure & Public Works
- ⊙ Events, Festivals & Venues
- ⊙ Logistics & Storage Yards
- ⊙ High-Profile & Sensitive Developments

## Steel Hoarding Panel Specifications

| PRODUCT NAME                   | HEIGHT | WIDTH  | GROUND CLEARANCE             | FRAME DIMENSIONS           | WEIGHT | MATERIAL         | FINISH         |
|--------------------------------|--------|--------|------------------------------|----------------------------|--------|------------------|----------------|
| 2.0m High Steel Hoarding Panel | 1980mm | 2140mm | 145mm                        | 38.1mm                     | 29kg   | Galvanised Steel | Galvanised/PPC |
| 2.4m High Steel Hoarding Panel | 2380mm | 2140mm | 145mm                        | 38.1mm                     | 34kg   | Galvanised Steel | Galvanised/PPC |
| 2.0m SteelWall                 | 2000mm | 2090mm | 600mm In-Ground Installation | 43mm x 35mm x1.2mm channel | 30kg   | Galvanised Steel | Galvanised/PPC |
| 2.4m SteelWall                 | 2400mm | 2090mm | 600mm In-Ground Installation | 43mm x 35mm x1.2mm channel | 40kg   | Galvanised Steel | Galvanised/PPC |

## When to Choose Standard Steel Hoarding

- **Short- to Medium-Term Projects:** Ideal for work sites lasting anywhere from a few days to a year.
- **No Ground Excavation Allowed:** Essential when working on existing pavements, roads, city centre footpaths, or paved areas where digging, trenching, or concreting into the ground isn't permitted.
- **Rapid Deployment & Dynamic Sites:** Perfect for projects where perimeters need to be set up in hours, or frequently shifted, expanded, and reconfigured as work progresses.
- **Standard-Risk Environments:** Suitable for everyday construction zones, utility works, and public events that require high privacy and visual screening without extreme impact-resistance requirements. **Lower Upfront Budget:** Offers a lower unit cost and cheaper, non-destructive installation compared to semi-permanent structural systems.

## When to Choose SteelWall Hoarding

- **Long-Term & Multi-Year Developments:** Major infrastructure projects, large commercial builds, housing developments.
- **High-Risk & High-Value Sites:** Essential for sites storing high-value machinery and materials where theft, vandalism, forced entry or vehicle impact risks are high.
- **High Wind-Load Environments:** Outstanding in coastal areas, elevated areas or exposed open sites. Because posts are embedded in the ground it outperforms surface-mounted panels with feet.
- **Timber Hoarding Replacement:** The modern, sustainable replacement for traditional painted timber hoarding - it won't rot, warp or degrade in severe weather and can be reused on future sites.

## Essential Additions:

**Coupler**  
Anti-Tamper or Standard, for joining multiple panels securely.

**Spanner**  
Anti-Tamper or Standard, for tightening/loosening bolts.

**Steel Hoarding Infill**  
Used to fill any gaps where the hoarding panels join. Ideal for high-risk sites.

**Stabilising Feet**  
Plastic, Thermoplastic and concrete options available.

**Stabilising Bar & 2 Ground Pins**  
This combo secures Temporary Fencing Gates panels to soft grass or soil.

**2.0m High Vehicle Hoarding Gate**  
Offers a secure access point for site vehicles.

## Temporary Works Design

A Temporary Works Design (TWD) is an engineering plan that outlines how Temporary Fencing Gates, hoarding, and gates will safely support construction activities until the work is complete.

Our engineers are available to survey your site and ensure your temporary system is up to BS 5975 safety standards. Simply add your product to the basket and select the option to include a TWD. Please note: One TWD is required for each product type. This is a paid-for add-on service.
