Cantilever Gate Kits for Smooth, Track-Free Access Control

Our Cantilever Kits deliver a superb combination of structural resilience and high-performance safety engineering, designed to integrate perfectly with demanding commercial and industrial boundary protections.

Constructed from galvanised steel and supported by a robust carriage roller assembly, these track-free systems eliminate ground obstacles, offering a high-durability solution that prevents track damage and maintains clear, effortless access across soft, gravelled, or uneven terrain.

Precision-built for long-term field performance, each low-profile cantilever setup is galvanised as standard to withstand the rigours of high-frequency vehicle traffic, constant environmental exposure, and severe weather conditions without compromising security.

Key Features

- ☉ **Cost-Effective Maintenance**
