Stylish Aluminium Pedestrian Gates, Secure Access Solutions

Engineered for privacy, security, and modern appeal, our Aluminium Pedestrian Gates provide a strong, low-maintenance access solution for residential gardens, commercial estates, and public parks. Made from lightweight, high-strength aluminium, they withstand harsh environments while providing a reliable, long-lasting barrier. A natural aluminium oxide layer and durable powder-coated finish offer excellent protection against rust and corrosion, making them ideal for coastal areas while avoiding the warping and upkeep associated with traditional materials.

With sleek, contemporary profiles, these gates require only a simple wash with soapy water to maintain. Available in widths from 900mm to 1200mm and heights from 1600mm to 2200mm, they come in standard black or grey, with custom colours available. Fully recyclable and built for versatility, they provide a secure, durable and attractive access solution for homeowners, landscape contractors, property managers, and public spaces.

Key Features

- ☑ **Ultimate Corrosion Resistance**
(Aluminium forms a natural oxide layer, making it completely rust-proof)
- ☑ **Versatile Size Configurations**
(Available in multiple height and width variations)
- ☑ **Ultra-Low Maintenance**
(This system will not rot or need regular painting and sealing)
- ☑ **Durable Powder-Coated Finishes**
(Sleek black or modern grey tough powder coating)
- ☑ **Sustainable & Eco-Friendly**
(Manufactured using recycled materials & recyclable at end of lifespan)

Suitable For

- ☑ Residential Gardens & Private Estates
- ☑ Coastal & High-Exposure Properties
- ☑ Commercial Grounds & Business Parks
- ☑ Public Parks & Municipal Spaces
- ☑ Side Entrances & Narrow Pathways

1

Vertical Solid Infill

Aesthetics:

Choose vertical infill for heritage, period or traditionally styled properties. Vertical lines draw the eye upward, creating an illusion of height, making the gate appear taller and more imposing.

Security:

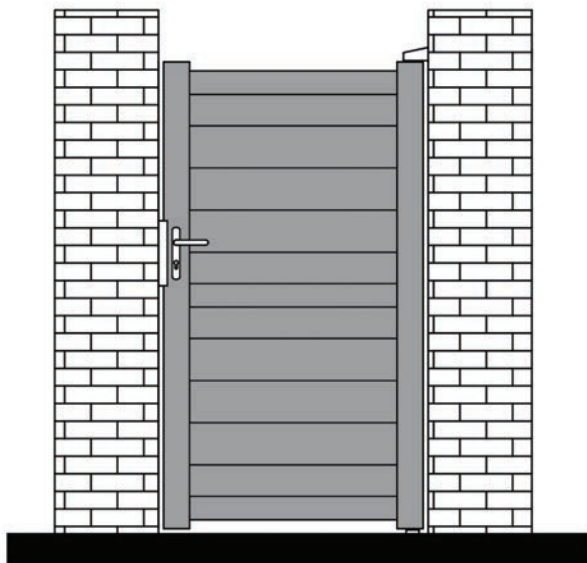

Vertical slats offer no horizontal footholds making the gate difficult to climb. Recommended for commercial boundaries and high-security residential side entrances.

Practical:

Vertical slats are resistant to sagging and are 'self-cleaning,' as rain and debris fall to the ground rather than pooling on flat edges.

RAL 7016

RAL 9005

2

Horizontal Solid Infill

Aesthetics:

Choose horizontal infill if you have a contemporary, new-build or coastal-style home. The horizontal lines draw the eye across the boundary, which can make a narrow pathway or garden entrance feel wider and more expansive.

Security:

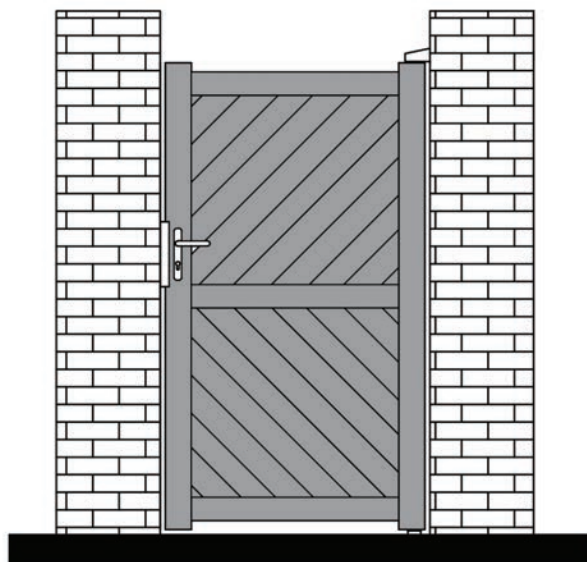

Select a horizontal infill for security only if the design is completely solid or gapless as the slats can inadvertently act as a ladder. This RMG design is solid.

Practical:

Horizontal lines offer a sleek, graphic boundary that pairs perfectly with modern decking, horizontal cladding and minimalist landscaping.

RAL 7016

RAL 9005

3

Diagonal Solid Infill

Aesthetics:

Choose diagonal infill when you want your gate to act as a bold, bespoke architectural feature. It offers a dynamic and distinctive contemporary look that stands out from standard fencing.

Strength:

A diagonal infill physically acts as a cross-brace. This adds lateral strength and rigidity to the frame, helping the gate to maintain its shape.
