## Galvanised Steel & PETG Shelters: Durability and Protection

Discover the perfect blend of strength and versatility with the Burbank Open-Fronted Shelter. Engineered to withstand harsh weather conditions and deter vandalism, these premium, free-standing shelters offer reliable, low-maintenance protection for a wide variety of outdoor applications. Whether you need a stylish designated smoking area, a comfortable passenger waiting zone, or a versatile outdoor shelter, the Burbank Shelter delivers uncompromising performance while ensuring superior visibility and ventilation.

Available in a standard width of 2m with depths ranging from 1m to 5m and featuring high-quality protective elements—including a 4mm UV-stabilised PETG clear sheet roof and half side panels—this fully modular, kit-form, bolt-down shelter can be perfectly tailored to meet the demands of your site.

### Key Features

- Premium Galvanised Steel Construction
  (Manufactured to ISO 1461 standards for durability and low maintenance)
- UV-Stabilised Clear Sheeting
  (4mm PETG clear sheet roof and half side panels for weather protection)
- Curved Water-Shedding Roof
  (Front-to-back curved design that prevents water pooling)
- Modular Kit-Form Assembly
  (A fully modular kit for easy on site building)
- Bolt-Down Format
  (Simply fixed to the ground with anchor bolts)

### Suitable For

- Designated Smoking Areas
- Passenger Waiting Areas
- Cycle & Scooter Storage
- Retail Trolley Parking
- Equipment & Waste Housing

### Choosing the Right Burbank Shelter for Your Project

**STEP 1: WHAT WILL THE SHELTER BE USED FOR?**

Determine exactly how the shelter will be used, as this dictates your space requirements. While it is frequently used for designated smoking areas due to its excellent ventilation and clear visibility, you should clarify if it will instead be used for passenger waiting, cycle storage, or trolley bays.

**STEP 2: SELECT THE REQUIRED DEPTH**

The Burbank Shelter has a standard width of 2m, meaning your main decision is the depth. Calculate how many people or items need to fit inside at peak times to choose from the available depth options:

1m to 2m depths: Best for compact spaces, small smoking areas (2-4 people), or housing pay-and-display machines.

3m to 4m depths: Ideal for medium-capacity needs, such as trolley parks, standard cycle storage, or mid-sized waiting areas.

5m depth: Suited for high-traffic environments or larger designated smoking areas.

**STEP 3: ASSESS THE GROUND FOR INSTALLATION**

Because the Burbank Shelter requires a bolt-down installation for maximum stability, you must evaluate your site's surface. Ensure you have a solid, level foundation (such as concrete) capable of securely anchoring the 140mm x 140mm x 10mm base plates.

**STEP 4: PLAN FOR EXPANSION**

Does your shelter need to grow in the future?

This is a modular kit and can be easily extended with extension bays when needed.

**STEP 5: PREPARE FOR DELIVERY & INSTALLATION**

The Burbank Shelter is a fully modular, kit-form product.

Ensure your site team is prepared for straightforward on-site assembly.

Because it arrives in a flat-pack style, you won't need to worry about the logistics of manoeuvring a bulky, pre-built structure through tight site access points, but you will need personnel or a contractor to bolt it together and anchor it to the ground.
