Versatile Timber Fencing, Secure Boundary Solutions

Engineered for privacy, security, and timeless outdoor appeal, our Timber Fencing provides a robust, adaptable boundary solution for private gardens, commercial grounds, and public parkland. Made from high-quality timber and built to withstand harsh weather, this versatile system enhances outdoor aesthetics while delivering a reliable, long-lasting physical barrier. Paired with rot-preventing concrete gravel boards and high-strength timber or slotted concrete posts, the system protects against moisture and ground contact, helping prevent rot and decay and significantly extending the lifespan of your perimeter.

Featuring traditional lap and feather edge panel designs, these easy-to-install components are available in standard 6ft widths, with heights from 3ft to 6ft and posts up to 10ft long. Available as individual panels, posts, and gravel boards, this customisable, low-maintenance timber solution provides landscape contractors, property managers, and homeowners with the structure, safety, and acoustic insulation needed for a range of outdoor projects.

Key Features

- Versatile Application

(Ideal for residential gardens, commercial properties and public parks)
- Flexible Panel Heights & Styles

(Traditional lap and feather edge panels in a choice of height)
- Dual Post System Options

(Pair the panels with timber or slotted concrete posts)
- Decay & Rot Protection

(Concrete gravel boards isolate panels from damp ground)
- Weather-Resistant Construction

(Made from high-grade timber to resist harsh outdoor elements)

Suitable For

- Residential Garden Boundaries
- Commercial Property Security
- Public Parks & Recreation Areas
- Public Zoning & Partitioning
- Privacy Screen

Selecting the Right Timber Fencing Components

1

Panel Styles: Lap vs. Feather Edge

Lap (Waney Edge) Panels:

Best for budget-conscious projects, sheltered suburban gardens, and quick, lightweight installations.

Feather Edge (Closeboard) Panels:

Best for high-wind or high-traffic areas, commercial sites, premium aesthetic upgrades, and long-term durability.

2

Post Types: Concrete vs. Timber

Slotted Concrete Posts:

Best for zero maintenance, high-moisture ground conditions, and effortless slide-in panel replacements.

Timber Posts:

Best for a continuous natural wood look, lower upfront costs, and easy handling in tight-access sites.

3

Gravel Boards: 6-inch vs. 12-inch

6-Inch Gravel Boards:

Best for standard moisture protection, level ground, and maintaining a minimal concrete border.

12-Inch Gravel Boards:

Best for sloped or uneven terrain, light soil/gravel retention, and extra protection against tools and damp ground.
