

DO NOT SCALE DRAWING

- Notes:**
- This model is based on a common bond pattern used in bricklaying.
 - When bolting posts to a wall—the type of fixing you use depends on the wall material (brick, concrete, etc.), the load involved, and the environment (indoor vs. outdoor). Here are some common fixings.
Sleeve Anchors / Through Bolts
Ideal for heavy-duty applications.
Expansion anchor that grips into concrete or brick.
Common for structural posts and outdoor use.
Shield Anchors (Rawl Bolts)
Good for solid masonry walls.
Expand when tightened to provide a strong hold.
Chemical Anchors (Resin Fixings)
High load capacity.
Resin is injected into a drilled hole, then a threaded rod or rebar is inserted.
Best for irregular, hollow, or old brickwork.
Tips
Always check wall condition first—crumbling mortar or hollow bricks need special care.
Use a spirit level to ensure vertical alignment.
Use corrosion-resistant hardware (e.g., galvanized or stainless steel) for outdoor use.
