3	ACCS-MSH-0050 - M8 x 40mm MESH SECURITY BOLT	6
4	ACCS-RIB-0003 - 60x60 BLACK RIBBED INSERTS	1

Notes:

- This model is based on a common bond pattern used in bricklaying.
 - When bolting posts to a wall—the type of fixing you use depends on the wall material (brick, concrete, etc.), the load involved, and the environment (indoor vs. outdoor). Here are some common fixings.
 - Sleeve Anchors / Through Bolts**
Ideal for heavy-duty applications.
Expansion anchor that grips into concrete or brick.
Common for structural posts and outdoor use.
 - Shield Anchors (Rawl Bolts)**
Good for solid masonry walls.
Expand when tightened to provide a strong hold.
 - Chemical Anchors (Resin Fixings)**
High load capacity.
Resin is injected into a drilled hole, then a threaded rod or rebar is inserted.
Best for irregular, hollow, or old brickwork.
- Tips**
Always check wall condition first—crumbling mortar or hollow bricks need special care.
Use a spirit level to ensure vertical alignment.
Use corrosion-resistant hardware (e.g., galvanized or stainless steel) for outdoor use.
